# CONSERVING

## FOR THE FUTURE

### FEATURED STORY

#### THE CHALLENGE

***Why is it essential to understand the seabirds in Mingan Archipelago?***

In addition to being affected by climate change, several species are also vulnerable to oil spills because they feed in areas with high maritime traffic.

#### A STEP IN THE RIGHT DIRECTION

Razorbills, Atlantic Puffins, Common Murres and Black-legged Kittiwakes were captured and fitted with transmitters to record their movements and map their feeding areas, with the help of the Canadian Wildlife Service and McGill University.

#### THE RESULT

The data reveals that despite their distinct behaviors, some species share the same feeding areas. Protecting these areas is therefore a priority and emphasizes the need to preserve the islands' marine ecosystem. Collaboration is ongoing to deepen knowledge about these seabirds.
